Parts of a Photoshop document. Underlying the Photoshop file are layers. Layers provide a way to stack multiple images and move them around on a document. You can alter an image by stacking a new image on top and moving it in place with editing tools. Layers can be combined and stacked and have different colors (or other effects) to create a finished composite image. Layers are an amazing tool for creating any type of image. In a graphic design, layers are used to create complex photomanipulations of two or more images. Layers within a Photoshop file are organized horizontally. Each layer can have a different opacity, color, or effect. You can move an image on top of an existing image using layers. The top layer is always the one you see. The other layer is always above the other layer in Photoshop. This provides an added layer of security. If you accidentally delete a top layer, its contents will be protected under other layers. Selecting a layer in Photoshop. Not all of the Photoshop commands are visible to users. A novice might not realize that the background layer is actually a collection of tools, which are not visible. This is very helpful in editing images. It's essential to be able to hide a part of a composite layer in order to use a tool that is only available to the layer behind it, called a nested layer. Layers are useful for Photoshop editing. The only problem is that there are hundreds of layers that automatically create themselves when a new file is opened. There is no way to decrease the number of layers within a Photoshop file. When a Photoshop file is opened, it has a default number of layers that starts with 100. If you have not yet named your Photoshop file, you will not have a name assigned to it. It is therefore important to name the file if it is going to be used later on. In addition, if you save it as a new file with a different name and open it, the number of layers will be different. A layer is a snapshot of what an image looks like at any given moment. For the sake of illustration, let's assume you are in a photo shoot and you want to cut out of a background. You can make an invisible layer called the background. After you are done, you can turn that layer into an actual cutout layer. When you

Translational control by miRNA target sites: A shortcut for accurate gene regulation and a way to modulate disease phenotypes. MicroRNAs (miRNAs) are small regulatory RNAs. They down-regulate gene expression by base pairing with target mRNAs. Most of them regulate hundreds of genes, but one target gene is down-regulated by a single miRNA. In contrast to the traditional models in which miRNAs inhibit gene expression by causing transcript destabilization or translational inhibition, several studies have shown that base pairing between miRNAs and target mRNAs can facilitate translation rather than inhibiting it. This type of translational regulation is commonly used by viruses and bacteria to regulate gene expression. Eukaryotic cells have evolved sophisticated mechanisms to ensure that gene expression is correctly controlled. Roles of translational control by miRNA targets have been found in development, cellular differentiation, metabolic homeostasis, immunity, and diseases. This article reviews the evidence of translational control by miRNAs. We focus on the mechanism of miRNA-mediated translational control in the regulation of mRNAs by displaying the miRNA target sites in 3'-untranslated regions (3'-UTR). We also discuss possible scenarios and modulations of translation by miRNA target sites in various processes and diseases.Speaking at a Spanish climate conference in Copenhagen, Prime Minister Gordon Brown on Monday began his keynote speech in which he promised that Britain would lead the global effort to save the planet from global warming. In his remarks at the Danish School of International Studies here, Brown promised action on climate change and called on other countries to follow Britain's lead in reducing the impact of carbon dioxide on the planet. "We must place all our efforts at creating a clean energy economy... in harmony with the future. If we do, we will leave our children a clean environment on this, the earth," Brown said. "To the rest of the world, this is a mark of global leadership that is the highest standard we could imagine for mankind, because we know the consequences if we fail." Addressing the United Nations, Brown went on to promise that Britain would double its emissions-cutting targets, raise taxes on energy firms and slash energy subsidies for business. He also sought to justify Britain's energy policies, saying the country was leading the world in fighting climate change by mandating that fuel used in new vehicles be at least 60% low-carbon. "With its Carbon Reduction Commitment

Archibald Campbell, 2nd Earl of Argyll Archibald Campbell, 2nd Earl of Argyll KT (c. 1561 – 26 November 1641) was a Scottish nobleman and politician. Life He was the eldest son of Archibald Campbell, 1st Earl of Argyll, and Isabella Douglas, daughter of Archibald Douglas, 5th Earl of Angus. He was made a knight of the Thistle in 1586. He attended the coronation of King James VI on 30 July 1587, and went with the king on his first expedition to Scotland in 1589. In 1597 Argyll was made Governor of Dumbarton Castle. In 1604 he was appointed Captain-General of the Honours of Scotland. He was a Privy Councillor from 1617 to 1620 and from 1622 to his death. Archibald married, in 1582, Isabel, daughter of Francis Hay, 2nd Earl of Erroll and Mary Keith, widow of her husband's elder brother, William, 1st Earl of Traquair. He succeeded as second Earl of Argyll, Lord Kilkerran and Lord Kilkerrin, Baron of Lorne (but not Earl of Argyll), on the death of his father in 1625. Argyll was made a Knight of the Thistle in 1605, and a Knight of the Order of the Garter on 10 December 1620. He was made Constable of Dumbarton and of Edinburgh Castle. He was created Earl of Argyll, and was subsequently created Lord Lorne, in the Peerage of Scotland, on 30 December 1624. He was also created Baron Kilkerrin in the Peerage of England, and Lord Kilkerrin in the Peerage of Ireland in 1624, of Lorne Castle in 1625, and Duke of Kilkerrin in 1640. Argyll was given various commissions as a Lord of Session from 1621. In 1629, he was appointed Lord Chancellor of Scotland. He succeeded his father as Chancellor of the Exchequer in 1633. He was also Chancellor of the University of Glasgow, Professor of the Civil Law in the University of Glasgow, and Master of the Lyon Court. He was also a Lord of Session in 1635 and 1642. He was created Lord High Admiral of Scotland in 1633 and was elected Captain General of the Honour of the North
